

Paperboy(Order 16) Chris Stewart

```
1 /*This is a simulation program written in Java.  Each day
   the news boy must order the papers for the next day.
2 He buys the papers for 35 cents and sells them for 1
   dollar. Any leftover papers can be sold back for 5 cents.
   The
3   simulation runs for 1000 days and generates the paper
   demand (from 15 to 20 per day) randomly for an observed
4   distribution. Over the 1000 day period, the simulation
   collects profit per day, average profit per day and the
5   average papers demanded per day.
